See warranty guide for complete details.

PRODUCT FEATURES

VISUAL Resilient is available in a variety of styles that replicate stone, tile, hardwood, and many other colors and designs to complement any décor. Resilient is a great choice for high-traffic areas.

WIDTH Resilient is sold in standard widths for a virtually seamless installation in any size room. Whether it's a small bathroom or large kitchen, you are likely to find a size that fits your needs and eliminates obvious seams.

WEAR LAYER Higher wear layer translates into a more durable product for you. The dimensional stability ensures that your flooring doesn't contract, expand, crack, or curl. It also provides protection and resistance against general wear, dents, cuts, and scratches.

GRADE LEVEL Carpet One® Floor & Home resilient floors are suitable for all grades levels, meaning they are suitable for any floor throughout the house, including the basement. These floors are intended for years of performance under the most challenging conditions.

BACKING The bottom layer provides structural strength and durability as well as moisture and mildew resistance. The various thicknesses make this product comfortable to walk on and provide the resilience that vinyl is known for. Most backings are felt, but the newest material is fiberglass. This gives a "cushier" feel to the floor. The type of backing determines how it can be installed.

INSTALLATION We assess your home for the best possible installation option, and our certified installers deliver on our promise of installation excellence.

FLEX FLOOR A.K.A. GLASSBACK is extremely comfortable underfoot and has a core of a highly resilient fiberglass base fully encapsulated on both sides, making it so strong and durable it will last a lifetime. Because of the construction, Flex Floor is far more flexible than traditional flooring materials, making it incredibly easy to work with when installing. With beautiful patterns, it's an ideal flooring solution for your kitchen, family room, entryway, or laundry area. This high-performance product is a superior choice for protection against scuffs, stains, scrapes, and tears while maintaining its original luster.

SHEET VINYL A.K.A. FELTBACK is available in various widths to reduce and even eliminate seams in your installation. Resilient requires minimal maintenance, is water resistant, and is so versatile it can be used on all grade levels.

LUXURY VINYL TILE (LVT) is an affordable and durable option for your home. It is water resistant, allowing it to be installed in any room, even the bathroom. It is a durable product that will resist scratching, ripping, gouging, etc. and is easy to repair or replace if one tile is damaged. LVT is offered in a variety of styles, colors, and patterns so you can find the look you want.

VINYL COMPOSITION TILE (VCT) is a commercial-grade flooring product that's common and durable. It features moderate pricing, easy installation, and assorted designs and colors. VCT is sold in 12" x 12" squares and effectively resists scuffing, burn marks, and dents.

LINOLEUM is an earth-friendly product made from all natural materials and is easily recyclable. Linoleum can last up to 40 years which makes it an economical flooring choice. The design of the floor extends through to the backing, so even if the floor wears, the design remains. Its relatively low maintenance and durability make this a wise flooring choice for the active household.
